IMPORTING PRESETS

REAL ESTATE PHOTOGRAPHY

In this guide, I'm going to show you how to import presets into your Lightroom. So let's go ahead and jump over into the computer.

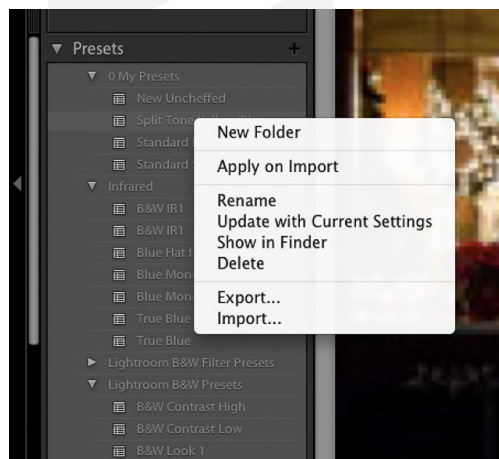

1 | STEP ONE

So first things first, you'll want to download the presets. Put it on your desktop and name the folder presets, you can download as many preset as you want.

2 | STEP TWO

Open Lightroom. And you'll also want to make sure that you have at least one picture in your library because if you go to the development tab without a picture, sometimes it won't allow you to add or remove presets or mess with them.

3 | STEP THREE

Go to the develop tab. By default, the tabs are closed up. You can open up presets right there.

4 | STEP FOUR

Click on the plus button and click Import presets. Go to the desktop and open the folder where you save your presets, select all of them and click Import.

Now we have these user presets loaded up.
